Summary

I'm an enthusiastic Computer Science student passionate about building impactful and intelligent web solutions. With a strong foundation in **Data Structures and Algorithms using C++**, I specialize in **Full Stack Development (MERN)** and enjoy creating efficient, real-time applications. I also explore the intersection of **AI and backend systems**, developing projects like a real-time local alert network and an AI-powered timetable generator. Currently, I'm expanding my skills in **cloud computing and deployment technologies** to build scalable, production-ready systems. I'm driven by curiosity, creativity, and the desire to turn innovative ideas into meaningful tech solutions.

Work History (Personal Projects)

N.O.V.A. | [AI Productivity Assistan](#) | [Live Demo](#)

Developed an AI-powered desktop productivity assistant featuring real-time voice interaction, intelligent task management, and system automation. Built with FastAPI, SQLite, Whisper STT, and local LLM integration (Qwen/Ollama), enabling voice-controlled task scheduling, application management, browser actions, reminders, and Windows system controls.
